TESTIMONIALS

M/s. Saffron Technologies have developed industrial software for us.
The brief description of the modules is as under.

Costing and Bill of Materials Software :

- The Costing software stores all products and the raw material items. The Bill of Materials includes assemblies and sub-assemblies and the raw material items contained in them for each product.
- The Raw Material Master costs are picked up from Purchase Accounting software.
- The software calculates costs of various assemblies and sub-assemblies based on the purchase costs.
- The software generates relevant reports as per our requirements.

WIP (Work-in-Progress) Software :

- This software uses the product Masters of the Costing Software.
- The Order Module registers the customer orders booked by the Marketing department.
- The Planning department creates production schedules and issues Work Orders to the shop-floor.
- The production status is recorded at each stage of production in batch mode as well as individual assemblies.
- Once the production cycle is over, the produced assemblies are taken for packing and dispatch.
- The software generates various reports of WIP status at every stage.
- It also generates customized reports for MIS.

The software developed by Saffron Technologies as described above are very user-friendly. We are very much satisfied with the development and technical support given by them.

We are going ahead with Saffron Technologies for further development projects and customization.

Ramesh Shastry

(Vice-President)
